American Hydroponics

# DARK ENERGY™

**Dark Energy™ is one of the most popular plant performance additives.**

Why? Because it really works... fast!

**Dark Energy™** is a unique blend of select **L-amino acids, vitamins** and proprietary **bionutrients**. Amino acids are the building blocks of proteins, enzymes, hormones and tissues which are essential to the structure and metabolism of plants. The powerful L-amino acids contained within Dark Energy™ are extracted from natural sources via enzymatic hydrolysis and fermentation. This ensures the **amino acids are extracted in L-form, which is the only form absorbed and utilized by plants**. These specialized processes are also responsible for the very distinct odor of Dark Energy™!

You can expect these benefits when using Dark Energy™:

- Accelerated chelation of essential macro and micro nutrients improving overall nutrient uptake
- Improved vegetative growth and chlorophyll content
- Stimulates natural production of plant hormones such as auxin and ethylene, responsible for growth and fast ripening
- Improved yield and quality of harvest
- Increased tolerance to stress
- Can be used from seed to harvest
- Highly concentrated so little is needed
- Compatible with all fertilizer programs, even other nutrient additives!

An increase in nutrient uptake and hormone levels aid the plant in effectively and efficiently completing it's life cycle in a shorter time period. The first time you use Dark Energy™ you will be amazed. Many growers have reported they **see a difference within 24 hours!**

If you are striving to push your plants to their maximum potential, and achieve quality only found in crops grown by the most advanced gardeners, you require Dark Energy™!

*Dark Energy™ is a chelator, increasing the absorption of all nutrients and additives, so use it with SuperNova™ and Super Charger™ for optimum results. For more info on Dark Energy™, please visit [www.amhydro.com](http://www.amhydro.com).*

## Specifications:

Hydroponic Use: 1/2 tsp Dark Energy™ to 1 gallon of water

Soil Use: 1/2 tsp Dark Energy™ to 1 gallon of water

Foliar Spray 1/4 tsp Dark Energy™ to 1 quart of water

(if used as a foliar spray, we recommend not spraying within 3 weeks of harvest)
